

***Action I would immediately take in order to make practice safer***

1. I would immediately stack and move table and chairs away from the practice facility.
2. The tarps have exposed metal ends and I would lean them up against the wall
3. I would move the multipurpose cart with Spartan into the end zone as far away from the field as possible.
4. I would also move the camera and other film equipment away from the side line and behind extra padding.
5. In an effort to maximize not only safety but field spaces I would move the dummies and push the lineman shoot as far away from the field as possible.

***Long term safety precautions***

1. I would store all bags in the same area so people would not trip over them when walking the sidelines.
2. Neatly stack all equipment and move metal equipment deep into the end zone.
3. Move trashcans away from entry ways as they are a tripping hazard.
4. Remove all the clutter from the parking area designed for the multi purpose car.
5. I would utilize all the protective pads throughout the facility.
